

## Medical Terminology Online

### Course Facilitator

A member of the KPSAHS Innovation Department will facilitate this course. You can reach them using this email: [KPSAHS-academiconlinehelp@kp.org](mailto:KPSAHS-academiconlinehelp@kp.org).

### Course Description

This is a six week online only course. You can access the course at any time within the six weeks. It is recommended that you use a computer. You can try the course on your mobile devices, but it is advised to use tablets or computers because smartphones have small screen sizes.

This course has a facilitator that will email you updates throughout the six weeks. There is no actual instructor for this course because it is all online and presentations are pre created.

This course provides an overview of the anatomical structures and physiology of the human body. The course discusses each body system in terms of the major anatomical structures and functions and explains how each system participates in homeostasis of the body. In addition, the course discusses selected major pathologies, including disease definitions and causes, signs and symptoms, diagnostic procedures, and possible treatments. Finally, the course discusses common issues and changes that occur in each body system throughout its lifespan.

### Course Outcomes

At the end of this course, students will be able to:

- Analyze medical terminology based on word structure
- Build medical terminology related to body structures, functions, and disorders
- Define common medical terms and abbreviations
- Describe medical terminology related to the blood and the lymphatic system
- Describe medical terminology related to the cardiovascular system
- Describe medical terminology related to the endocrine system
- Describe medical terminology related to the eye and ear
- Describe medical terminology related to the gastrointestinal system
